

Sphelar Lantern

Sphelar Lantern is a solar lamp using micro spherical solar cells - called 'Sphelar'. These pearl-like photovoltaic cells generate electricity when exposed to the sunlight. Stimulates your dinner table ambiance or offers tranquility by the bedside.

Play back!

The shape of Sphelar Lantern is inspired by hourglass. Place it with the Sphelar end up where the sunlight is plentiful. In the evening, bring it to where you like and turn it upside down to turn it on... Your time with Sphelar has begun.

What is Sphelar?

Sphelar are micro spherical solar cell, about 1 to 2 mm in diameter, that look like beads of coloured glass. These innovative solar cells catch the sun's rays from all directions.
