

Our Power To Mill

IKUTA
Three In One Technology

High precision – high quality – mill copper equipment

Three In One Technology

Milling Equipment Fit for Carbide Cutter

A highly precise custom-tailored thickness and a super fine surface condition delivered by our 30m long milling line. Born out of our proprietary know-how, this unique dual strip milling line has established its presence worldwide and has achieved world class standard by responding to increasingly stringent requirements for elongated copper technology.

WC Carbide Blade Milling Cutter

A WC Carbide Blade Milling Cutter that has a longevity three times higher than that of High Speed Steel Cutter (HSS) milling cutters. Ikuta's cutters bring enhanced rationalization and productivity at the production level by reducing the replacement cost and the need of recurrent maintenance.

Grinder for Super-hard Milling Cutter

The finish surface precision all depends on the quality of the cutter. Hence the high value of our integrated grinder dedicated to the maintenance of the WC Carbide Blade Milling Cutter. With a precision of 1/100, it automatically identifies the best grinding method that is the most suited to the finished surface material. Our grinder is used in copper elongation plants throughout the world.

IKUTA is also in our pockets

From cell phones and personal computers to car and game materials and even money coins. Technology born out of Ikuta's high quality, high precision milling lines is called upon in our everyday lives' high precision devices.
