

KGS[®]
Kyoto Grain System

Kyoto Grain System Co., LTD.

Company's Profile

The grain we processed is used for many drinks and foods.

In Japan, the convenience stores are lined with many PET bottle beverage grain teas to reflect the health-conscious. We are changed to drink raw materials to process the grain material, they have been used in PET bottle beverage. Our processed raw materials are also used in sweets and bread, etc. In recent years, we are expanding the business from beverage to foods, health foods and pharmaceuticals.

In order to differentiate ourselves from other companies' products, manufacturers have been asked to "have something that is not in the market", and we have been serving that.

Please contact us if you need anything.

Our company's advantage

1. There are plenty of trial production results. (We will test the actual machine.)

Technical capabilities improved as trial production was repeated, and materials that could not be handled in the past could also be processed. I own a laboratory machine, but most of the prototype is done using actual machine. Therefore, it is also characterized by a smaller difference in scaling up from prototype to manufacturing.

2. Original machinery and equipment (Scale up is also possible.)

We are remodeling ourselves to original machines, we own equipment that other companies cannot imitate. Because we possess several types, large and small lot processing lines, depending on the type, scale up of the same line is also possible. Depending on customer's request and production lot, we are also flexible in improving equipment.

3. Acquisition of FSSC 22000 (HACCP certification)

We acquired internationally recognized FSSC 22000 certification in 2012. All employees are working together towards food safety management.

PRODUCTS

We carry out heat treatment processing on agricultural products and we will process them to beverage / food raw materials suitable for customer's request. We are making reliable and safe products under the Food Safety Management System of FSSC 22000.

Beverage material

We manufacture it under strict data management so that it can be applied as raw material for PET bottle beverage.

[Example : Roasted rice/ Roasted barley/ Cereal tea etc.]

(Roasted rice) (Roasted barley) (Roasted corn) (Roasted pearl barley)

Food material

Please use it as raw material for cooking (time cooked), confection and Bakery ingredients.

[Example : Pregelatinized rice/Roasted beans/ Roasted soybean flour/ Millet puff (crisp) Items/ Various powders]

(Pregelatinized
Germinated brown rice) (Roasted Azuki beans) (Roasted soybean flour) (Barley puff (crisp))

OEM

We will process with machines customized to our original and technology we cultivated.

[Processing technology]

Steaming +Drying/ Roasting/Soybean dedicated line (Roasted soybean flour)/ Puffing (Crisping)/ Pulverizing/ Chopping of raw material for haerbal medicine etc.

[Certifications] @ Mainly acquired at the Nara factory.

FSSC22000 certification / JAS organic certification / The manufacturing license of Food additive / The manufacturing license of pharmaceutical raw materials / Bonded factory (Only one part)

Import and export business

We have cooperating companies in China. In addition to importing Chinese tea (Oolong tea and Jasmine tea etc.), we make use of its sales channels and supply raw materials to overseas.

[Import item]

Oolong tea/ Jasmine tea/ Chinese roasted barley tea/ Pu'er tea etc.

[Export record] China/ Thailand/ USA etc.

*We hope to deliver impressions
and health to eating habits.*
